Homework 10 – Testing

1. Unit Test: Each member choose important units (i.e. class in OOP) for least 2 assigned use cases.
   a. Design test cases for those units, write a report to describe adopted techniques and description of test cases and test data.
   b. Write codes for test cases (automatically) using a library (E.g. JUnit for Java, CUnit for C++)
   c. Write a unit test report to present and summarize the results.
2. System Test:
   a. Make assignments for the system test, e.g. WHO tests WHAT for WHOM?
   b. Each tester need to design test cases with test data for use cases they need to test
   c. Do the testing (manually) for test cases and write the report to present and summarize the result.
